# **NovaTec® Solub**

## **Ammonium Stabilized Water Soluble Fertilizer**

**Nitrogen efficient fertilization for  
modern irrigation systems**

## How does it work?

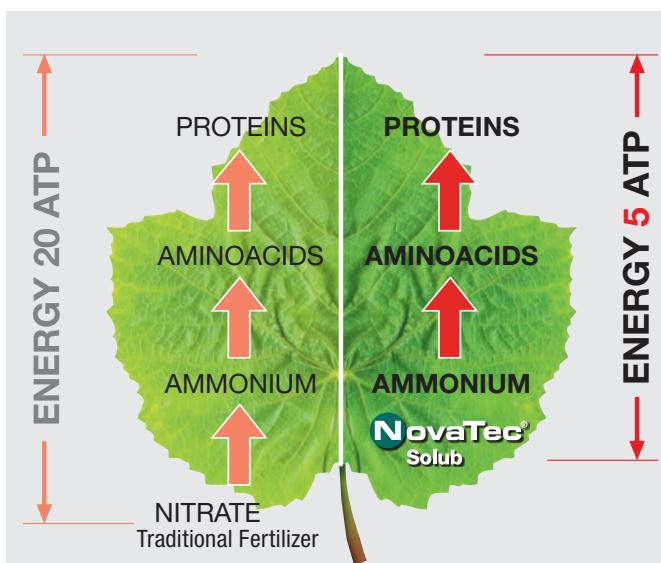

### Ammonium-based fertilization with nitrification inhibitor

- NovaTec® Solub delays the nitrification of Ammonium ( $\text{NH}_4^+$ ) to Nitrate ( $\text{NO}_3^-$ )
- NovaTec® Solub leads to a more efficient  $\text{NH}_4^+$ -based N-nutrition

## Ammonium Nutrition

- Energy savings by Ammonium-N-nutrition (no biological reduction required)
- Enhanced flowering (Ammonium promotes synthesis of phytohormones and polyamines)
- Ammonium nutrition favours root growth

ATP = Adenosine Triphosphate.

ATP is one of the most important energetic carriers in organism.

## The pH-effect

- Ammonium nutrition leads to acidification of the rhizosphere
- Absorption of micro elements and Phosphate is increased by this effect
- Prevailing  $\text{NO}_3^-$ -absorption leads to alkalization (standard fertilizer)

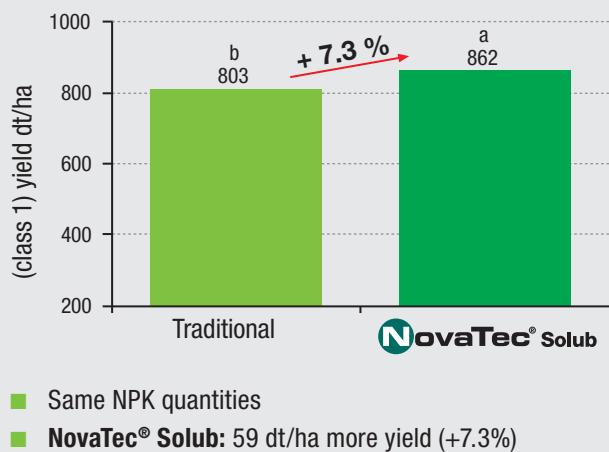

## Less N-leaching

- NovaTec® Solub strongly reduces Nitrate leaching due to a higher Ammonium concentration in the soil
- NovaTec® Solub leads to significant ground water protection
